

Site Prep Information

In order to ensure your delivery/installation go as smoothly as possible, please review the following information regarding the area where your new structure will be placed. Answer the questions below as accurately as possible. This will allow our vendors and delivery persons to provide you with the best experience possible.

As the owner, you are responsible for making sure that the site where your new structure is being placed is level and accessible to the delivery team. While every effort will be made to ensure your unit is placed exactly to your specifications, the delivery team cannot take down fences, move buildings, vehicles, gates or other obstructions.

If you are purchasing a pre-assembled unit, the site will need to be fully accessible to a truck and trailer. Please consider low hang branches and power lines to be obstacles you will need to (re)move prior to delivery. Consider the height of your new purchase and then add four feet to the overall height to ensure clear access.

If your new structure is being built on site, please ensure the delivery team has access to the site through an opening that will allow a pickup truck at minimum.

Site Information:

Unit is being installed on: Dirt Concrete Wood Grass

Other: _____

Fences present: Height: Gates present: Width:

Height clearance to site:

Can deliver using: Trailer Skid Loader Other:

(Truck/Trailer requires 10' clearance plus overhang of product. Skid Loader requires 7' minimum.)
